INTRODUCTION

In recent years, Missouri traffic safety authorities have expressed concern over (1) animal-vehicle crashes involving deer and (2) crashes caused by drivers avoiding deer on roadways. This is one in a series of reports designed to identify the seriousness and characteristics of deer-involved traffic crashes on Missouri's public roadways.

1. METHODOLOGY

To assess the problem of 2005 deer-related traffic crashes in Missouri, two information sources were utilized. In the first instance, data from the National Highway Traffic Safety Administration (NHTSA), Fatality Analysis Reporting System (FARS) were analyzed. In this analysis, fatal crashes were identified where the first harmful event involved a motor vehicle striking a deer. In addition, fatal crashes were identified where drivers made evasive maneuvers to avoid deer and no deer were struck but their evasive maneuvers contributed to the cause of the traffic crash.

The second source of information used in this study was the Missouri Statewide Traffic Accident Records System (STARS). Using STARS data, all 2005 Missouri traffic crashes where a deer was struck as part of the first harmful event were identified and analyzed (not just fatal crashes). However, this information source was limited in that it did not contain data identifying traffic crashes involving a deer avoidance maneuver where the animal was **not** struck. As a result, analysis could not be conducted on the deer avoidance maneuver problem associated with all Missouri traffic crashes.

2. DISCUSSION OF FINDINGS

The following is a discussion of findings obtained from an analysis of Missouri's 2005 traffic crashes related to deer involvement:

FARS DATA SOURCE

An analysis was conducted of all 2005 Missouri fatal traffic crashes. There were 1,117 such crashes in which 1,257 persons were killed. Four people lost their lives in four fatal crashes involving a vehicle striking a deer and one person died in one crash where deer were avoided.

STARS DATA SOURCE

- In 2005, Missouri had 3,506 traffic crashes where deer-vehicle strikes occurred in the first harmful event. One deer strike occurred every 2.5 hours in the State.
- In 2005, 4 people were killed and 333 injured in these types of crashes. One person was killed or injured every 1.1 days.
- Of all deer strike traffic crashes, 30.2% occurred in an urban area and 69.8% occurred in a rural area of the State. Even though rural areas seem to be overrepresented, the eight highest ranking Missouri counties experiencing this problem are associated with major metropolitan areas. These include: Jackson, St. Louis, Jefferson, Clay, Platte, Boone, St. Charles, and Franklin. Deer strike traffic crashes in these counties account for 38.9% of the total.
- Four out of five, or 80.6%, of the 2005 deer strike crashes occurred on State-maintained roadways. The greatest proportion occurred on State Numbered Routes (27.0%), followed closely by U.S. Highways (23.2%) and State Lettered Routes (17.2%). An additional 13.0% occurred on Interstates, 11.4% on city streets, and 6.1% on county roads.
- Calculations show slightly less than half, or 47.3%, of the 2005 deer strike crashes occurred from October through December, with the largest proportion in November (22.3%). When discussing this with the Missouri Department of Conservation, they suggested the major cause of increased roadway crossings by deer during this period is mating season. The peak occurs about mid-November. In addition, deer hunting season also may cause an increase in roadway crossings. The slight increase in deer-involved crashes noted in the spring months may be attributed to yearling fawns dispersing from their mothers just prior to the arrival of newborns.
- Friday and Saturday were the most likely weekdays for deer strike crashes to occur. Nearly one in three, or 31.6%, occurred on these two days in 2005.
- The majority of deer strike crashes occurred from 5:00 p.m. through 6:59 a.m. This time period accounted for 84.5% of the total.
- Of the drivers striking deer, 60.5% were male and 39.5% were female. The average age of the driver was 40.0 years.
- Of the drivers striking deer, 85.9% had a Missouri driver's license, 13.7% had an out-of-state driver's license, and 0.4% were unlicensed at the time of the crash.

3. FINDINGS

The following is a series of tables and figures which characterize Missouri's 2005 deer strike traffic crash problem.

**2005 MISSOURI FATAL TRAFFIC CRASHES
DEER INVOLVEMENT¹**

TYPE OF CRASH	FATAL CRASHES	%	FATALITIES
DEER-VEHICLE STRIKE	4	0.4	4
AVOIDING DEER	1	0.1	1
NO INVOLVEMENT	1,112	99.5	1,252
STATE TOTAL	1,117	100.0	1,257
